OBJECTIVE

Add value to a team through technical skills that I possess and also ones that I will develop. Work with integrity, respect others, enjoy the time I spend.

APPLICATIONS

Search U:

- Search U was the first application that I developed with a team. Using agile development we communicated well and kept each other motivated and moving forward.
- The application uses 2 separate API's to create a search engine that will show the user the quality of life rating for the city that the school they are researching is in. It also gives the user detailed information about the school they have chosen.

Weather Dashboard:

- This application uses an OpenWeather API to obtain the current weather in the city the user has searched for. It then takes the latitude and longitude from that call and runs another call to get more detailed information along with a 5 day forecast.

Work Day Planner:

- The Work Day Planner application is a 9AM-5PM daily calendar where you can log your events for the day. It allows the user to be able to save their information and also delete it. The calendar changes dynamically based on the time. If an hour on the calendar has passed it will show up as grey, if it is current it will show as red, and if it is still to come it will be green.

EDUCATION

Portland Community College — Associates Degree in General Studies, 2013

Georgia Tech — Full Stack Web Development Boot Camp, Currently Attending

TECHNICAL SKILLS

Working knowledge in HTML, CSS, Bootstrap, Javascript, JQuery, node.js.

SOFT SKILLS

Great communicator, logical thinker, good time management, hard working and patient. Stubborn enough to get things done, but not too proud to seek help.
